PROFESSIONAL SUMMARY

Data Analyst with experience across finance, reporting, governance, and BI platforms supporting U.S. enterprise engagements. My stack lives in three places: SQL across Snowflake, SQL Server, Oracle, and DB2; Power BI, SSAS, and Tableau for dashboards and semantic models with Row-Level Security; and Collibra catalogs that survive audit. Python (pandas, FastAPI), SAS, and advanced Excel cover the rest. Most recent engagement at Startech Networks (Verizon) replaced a manual Excel reporting practice for a 150-user finance and operations group with governed Power BI dashboards, and closed an external SOX audit clean. Microsoft PL-300 and DP-900 certified.

TECHNICAL SKILLS

- **SQL & Databases:** Advanced SQL, CTEs, window functions, stored procedures, query tuning, execution-plan reading, Snowflake, SQL Server, Oracle, DB2, Azure SQL
- **BI & Visualization:** Power BI, DAX, Row-Level Security, scheduled refresh, paginated reports, SSAS, Tabular models, MDX, Tableau, LOD calcs, drill-downs, SSRS
- **Programming:** Python, pandas, NumPy, requests, FastAPI, Pydantic schemas, REST APIs, JSON
- **Statistical Analysis (SAS):** Base SAS, PROC SQL, DATA steps, PROC FREQ, MEANS, UNIVARIATE, PROC REG, LOGISTIC, SAS macros, ODS, trend and variance analysis, outlier detection
- **Data Modeling:** Star schema, fact and dimension design, source-to-target mapping, slowly changing dimensions
- **Data Quality:** Cross-system reconciliation, DQ rule authoring, completeness, accuracy, timeliness, consistency-, automated QA checkpoints, exception handling
- **Data Governance:** Collibra, catalog, lineage, business glossary, DQ rules, sensitivity classification, metadata, RBAC
- **Excel & Financial Modeling:** Power Pivot, INDEX-MATCH, VLOOKUP, pivot tables, budget vs. actuals, variance analysis
- **Compliance & Audit:** SOX 404 controls, audit evidence packs, regulatory reporting, lineage documentation
- **Cloud:** Microsoft Azure, DP-900, Snowflake cloud data warehouse
- **Workflow:** Agile / Scrum, JIRA, Confluence, SharePoint, Git

PROFESSIONAL EXPERIENCE

Startech Networks (Verizon engagement)

Jul 2025 - Feb 2026

Senior Data Analyst, Data Governance and Financial Reporting

Charlotte, NC

- Joined a 150-user finance and operations group that was sharing daily reports through emailed Excel exports. Rebuilt the flow as three Power BI dashboards (revenue, budget vs. actuals, expense variance) on a star-schema mart, with department-level Row-Level Security in DAX. Three department heads moved over within two weeks, reducing the team's dependence on manual Excel distribution for executive-facing numbers.
- Built a data catalog in Collibra for 300+ regulated elements, establishing end-to-end lineage and quality rules that enabled a clean SOX audit with zero findings on my controls.
- Built a Python FastAPI service that provided secure, certified financial KPI data as JSON, eliminating manual extract requests by enabling easy access for downstream teams and Power BI through a Web connector.
- Detected and resolved monthly data reconciliation failures between Snowflake and SQL Server by creating SQL CTEs and Python scripts to compare key metrics, routing exceptions to a steward queue, and preventing two major discrepancies from reaching executive reports.
- Implemented data quality rules and automated checks in SQL, Python, and SAS, reducing resolution time and improving compliance by routing failures directly to responsible owners with SLAs.

Tek Leaders

Feb 2020 - Dec 2023

Data Analyst, Finance and Risk Reporting (Deloitte US engagement)

Hyderabad, India (Remote to U.S. client)

- Discovered and fixed an ETL misclassification impacting executive P&L data across 2.4 million records by reconciling Oracle, SQL Server, and DB2 systems, enabling risk leaders to revise underwriting assumptions and developing an automated QA checkpoint that now prevents similar ingestion errors.
- A 150-user finance and risk organization was waiting three days for monthly reports. Built 12 Tableau and Power BI dashboards backed by star-schema marts. Individual report prep dropped from one day to two hours, and the cycle compressed to same-day.
- 280+ financial data elements had no documented lineage. Mapped each source to target with transformation rules and DQ attachments. Three regulatory data requests later closed using those mappings alone, with zero analyst involvement.
- During exploratory analysis in Python (pandas) and SAS (PROC FREQ, PROC MEANS), product-level charge-off categorization in the SQL transformation layer looked off. Walked risk leadership through the deltas; they revised credit-risk decisioning after the correction.
- Wrote 50+ optimized SQL queries (CTEs, window functions, indexed views) that replaced analyst-driven manual extracts. Self-service adoption removed the analyst as a bottleneck for routine pulls.

Qualcomm

Jan 2018 - Feb 2020

Reporting Analyst, Financial Data and Systems

Hyderabad, India

- Owned on-demand financial reporting for 500+ employees. Built and maintained 40+ SSRS reports on SQL Server with parameterized inputs and subscription delivery. Brought report generation time down by 30% through indexing, execution-plan tuning, and CTE refactoring.
- Certified a financial system data migration end to end. Wrote before-and-after SQL validation queries proving zero record loss and 100% data fidelity across every migrated table.
- Set a personal rule that no figure reached leadership without being cross-checked against source. Two years in, zero unvalidated numbers reached executives.
- Built Excel budget vs. actuals variance models (Power Pivot, INDEX-MATCH) and SAS statistical summaries (PROC MEANS, PROC UNIVARIATE) for monthly leadership reviews and business-unit spending decisions.

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate (PL-300)
- Microsoft Certified: Azure Data Fundamentals (DP-900)
- IBM Data Analyst Professional Certificate

EDUCATION

Christian Brothers University

Jan 2024 - Dec 2025

M.S., Computer Information Systems

Memphis, TN

- GPA: 3.88

Jawaharlal Nehru Technological University

2014 - 2018

B.Tech., Computer Science and Engineering

India

- GPA: 3.60
